

Dan Antrim graduated from Wheaton High School in 1986. Academics were not a priority for Dan in high school and he hung out a lot in shop classes. It wasn't until his sophomore year in college that he discovered a love for engineering.

Dan graduated from Moorhead State University in 1992 with a BS in Industrial Technology. He went on to graduate from Indiana University- Kelly School of Business with his Master's in Business Administration, while serving in many different roles for Bobcat Company. Dan also earned several patents for bucket cells. He became a Vice President of North American Operations before the age of 40.

This \$300 scholarship is to honor Dan's memory as well as his passion for Engineering. And to help graduating seniors understand that you can do anything you put your mind to, once you find your passion.

Applications due to Mrs. Hersch by April 22, 2024

*"Find the thing that ignites your passion, engages your mind, and dare to lead."—
